2

p-Value

- **Smallest** significance level at which null hypothesis is rejected
- Also call observed significance level (OSL)
- Think of P-value as area under the curve

3

Example

- Nicotine level in cigarette is normally distributed
 - Average nicotine level = $\mu = 1.5$, $\sigma = 0.2$
- Customer wants to check nicotine level
 - $H_0: \mu = 1.5$
 - $H_a: \mu > 1.5$
- If test statistic $z = 2.10$, then
 - $\alpha = 0.1$, $z_\alpha = 1.2816$: $z > z_\alpha \Rightarrow$
 - $\alpha = 0.05$, $z_\alpha = 1.6449$: $z > z_\alpha \Rightarrow$
 - $\alpha = 0.01$, $z_\alpha = 2.3263$: $z < z_\alpha \Rightarrow$

What's smallest α to reject H_0 ?

Goal is to minimize
rejection region α

Supaporn Erjongmanee
fengspe@ku.ac.th

4

Example: P-value for z-test

- Upper-tailed test case

Goal is to minimize rejection region α

α decreases as z_α increases

Equivalently, find largest z_α that results to reject H_0

Let z = test statistic

When $z < z_\alpha$, then H_0 is not rejected

α = Rejection region

α = Rejection region

If $z_\alpha < z$, then H_0 is rejected but α is not minimum still.

α is minimum when $z_\alpha = z$.

5

Example: P-value for z-test

P-value = Smallest significance level at which H_0 is rejected

- Upper-tailed test case (cont.)

Rejection region = area on the right hand side of test statistic

z = test statistic
 z_α = critical value

- Our goal is to minimize α
- Minimum α occurs at critical value z_α = test statistic z
- Thus, **P-value** = $1 - \Phi(z)$

Supaporn Erjongmanee
fengspe@ku.ac.th

Statistics in Computer Engineering
Slide 6

6

P-value for z-test (cont.)

- Null hypothesis: $\mu = \mu_0$

Alternative Hypothesis	P-value	Test
$H_a : \mu > \mu_0$	$1 - \Phi(z)$	Upper-tailed test
$H_a : \mu < \mu_0$	$\Phi(z)$	Lower-tailed test
$H_a : \mu \neq \mu_0$	$2(1 - \Phi(z))$ or $2(\Phi(- z))$	Two-tailed test

$Z = \text{test statistic}$

Upper-tailed Test

Lower-tailed Test

Two-tailed Test

Computer Engineering
University

7

Example

- Target thickness of silicon wafer = 245 μm
- 50 wafers are sampled and collected for thickness
 - Sample mean = $\bar{X} = 246.18 \mu\text{m}$
 - Sample standard deviation = $S = 3.60 \mu\text{m}$
- Question: What is p-value to reject H_0 ?
- Our goal is to check wafer thickness level
 - μ = average wafer thickness
 - $\mu_0 = 245$
 - $H_0: \mu = 245$
 - $H_a: \mu \neq 245$

8

Example (cont.)

$$H_0: \mu = 245$$

$$H_a: \mu \neq 245$$

Alternative Hypothesis	P-value
$H_a: \mu > \mu_0$	$1 - \Phi(z)$
$H_a: \mu < \mu_0$	$\Phi(z)$
$H_a: \mu \neq \mu_0$	$2(1 - \Phi(z))$ or $2(\Phi(- z))$

- Test statistic:

$$Z = \frac{\bar{X} - \mu_0}{S/\sqrt{n}} = \frac{246.18 - 245}{3.60/\sqrt{50}} = 2.32$$

- This is two-tailed test

- P-value** = $2(1 - \Phi(|z|))$

$$= 2(1 - \Phi(|2.32|))$$

$$= 2(1 - 0.9898) = 0.0204$$

Question:

Given $\alpha = 0.01$ and p-value = 0.0204, do we reject H_0 ?

Supaporn Erjongmanee

9

Example (cont.)

Question:

Given $\alpha = 0.01$ and p-value = 0.0204, do we reject H_0 ?

Consider upper-tailed test

If $p > \alpha$, then test statistic z does not fall in rejection region.

Do not reject H_0

H_0 is rejected when $p < \alpha$

Supaporn Erjongmanee
fengspe@ku.ac.th

Statistics in Computer Engineering
Slide 10

Department of Computer Engineering
Kasetsart University

10

Example (cont.)

$$H_0: \mu = 245$$
$$H_a: \mu \neq 245$$

$$2(1 - \Phi(|z|)) = 0.0204$$

- Test statistic:

$$Z = \frac{\bar{X} - \mu_0}{S/\sqrt{n}} = \frac{246.18 - 245}{3.60/\sqrt{50}} = 2.32$$

- This is two-tailed test

- P-value = $2(1 - \Phi(|z|)) = 2(1 - \Phi(|2.32|)) = 0.0204$

Given $\alpha = 0.01$ and p-value = 0.0204, do we reject H_0 ?

- Given $\alpha = 0.01 < \text{p-value} = 0.0204$
 - Test statistic falls outside rejection region for $\alpha/2$
 - Null hypothesis is not rejected
 - At significance level = 0.01, wafer thickness is not different from the target value

11

Outline

- P-Value
 - z-test
 - t-test

Supaporn Erjongmanee
fengspe@ku.ac.th

Statistics in Computer Engineering
Slide 12

Department of Computer Engineering
Kasetsart University

12

Example: P-value for t-test

- Similar to z-test
- Upper-tailed test case:

- Our goal is to minimize α
- Minimum α occurs at critical value $t_{\alpha, df}$ = test statistic t
- Thus, **P-value** = area in upper tail of test statistic t

13

P-value for t-test (cont.)

- Null hypothesis: $\mu = \mu_0$

Alternative Hypothesis	P-value	Test
$H_a : \mu > \mu_0$	Area in upper tail of test statistic t	Upper-tailed test
$H_a : \mu < \mu_0$	Area in lower tail of test statistic t	Lower-tailed test
$H_a : \mu \neq \mu_0$	Area in two tails of test statistic t	Two-tailed test

14

Example

- Our goal is to check fuel efficiency whether it is better than average = 20 mpg
- Collect fuel efficiency (miles per gallon (mpg)) of 4 cars
 - $x_1 = 20.830$, $x_2 = 22.232$, $x_3 = 20.276$, $x_4 = 17.718$
 - Sample mean = $\bar{X} = 20.264$ mpg
 - Sample standard deviation = $s = 1.8864$ mpg
- Question: What is p-value to reject claim ?
- Set up hypothesis
 - μ = average fuel efficiency
 - $\mu_0 = 20$
 - $H_0: \mu = 20$
 - $H_a: \mu > 20$

Supaporn Erjongmanee
fengspe@ku.ac.th

Statistics in Computer Engineering
Slide 15

Department of Computer Engineering

15

Example (cont.)

Upper-tailed Test

- Test statistic:

$$t = \frac{\bar{X} - \mu_0}{S/\sqrt{n}} = \frac{20.264 - 20}{1.8864/\sqrt{4}} = 0.2799$$

- This is upper-tailed test with 3 degree of freedom
 - P-value = area on the right of $t = 0.2799$
 $= 1 - 0.6011 = 0.3989$

Given $\alpha = 0.05$ and p-value = 0.3989, do we reject H_0 ?

* Tool: In Python's scipy, use 1-t.cdf

* Tool: <http://stattrek.com/online-calculator/t-distribution.aspx>

Supaporn Erjongmanee
fengspe@ku.ac.th

Statistics in Computer Engineering

16

Example (cont.)

Upper-tailed Test

- Test statistic:

$$t = \frac{\bar{X} - \mu_0}{S/\sqrt{n}} = \frac{20.264 - 20}{1.8864/\sqrt{4}} = 0.2799$$

- This is upper-tailed test with 3 degree of freedom
 - P-value = area on the right of 0.2799 = 1 - 0.6011 = 0.3989

Given $\alpha = 0.05$ and p-value = 0.3989, do we reject H_0 ?

- Given $\alpha = 0.05 < \text{p-value} = 0.3989$,
 - Test statistic falls outside rejection region for α
 - H_0 is not rejected
 - At significance level = 0.05, fuel efficiency is 20 mpg
